The first item you need when fly-tying is a hook and the **first lesson** to learn, as a beginner fly-tier, is the parts of the hook and the different hooks used for fly-tying.

Why? Because the hook is the gauge for all the proportions of materials added as you tie the fly ... and recreational fly anglers use a hook to catch fish.

Important to Note.

The fish decides if it likes the fly.

Any fly that **does not come apart** and **catches a fish** is a good fly. Flies do not have to look good to catch a fish. Flies sometimes are tied to catch the angler.

There are no tricks to fly-tying, only different ways to tie flies.

Let me know if you have any questions and if I can be of any assistance. I have been tying flies for years, but I am not a perfect fly tier. It is good to have someone teach and show you how to tie flies. Enjoy the fly-tying and the fishing!
